

Whisper Walls®

WhisperClouds, Canopies & Baffles

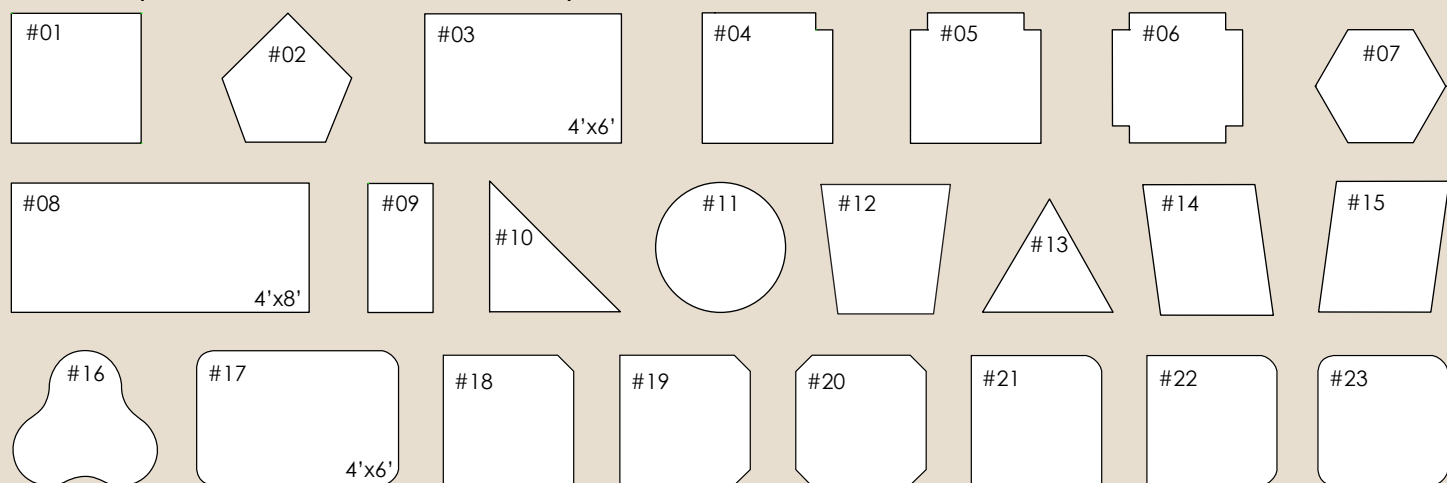

WhisperClouds

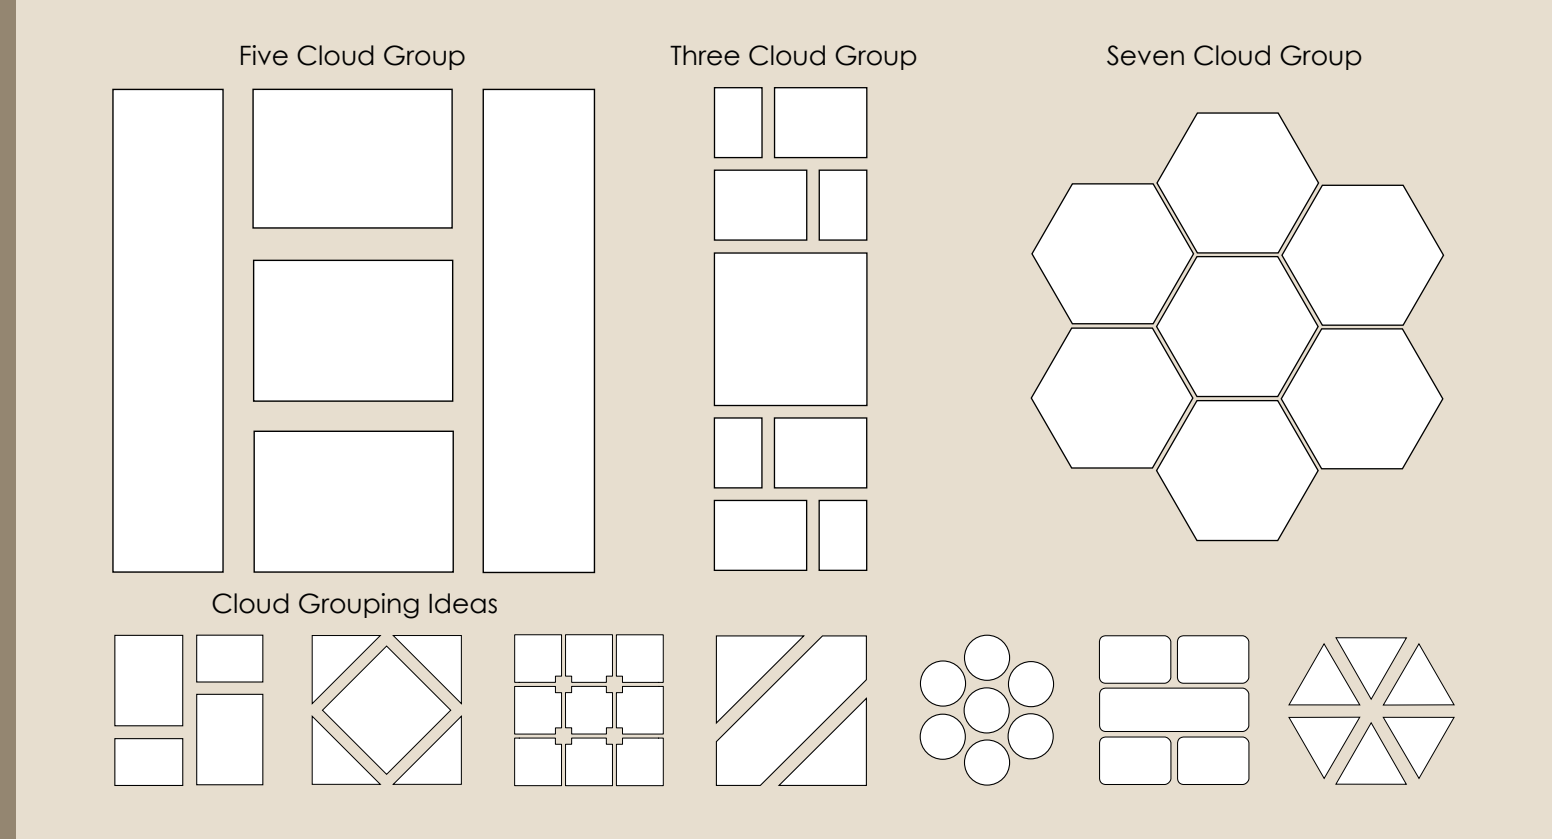

Welcome to The World of WhisperClouds, the new family of acoustical products developed specifically for architects, interior designers, industrial designers and acoustical engineers. WhisperClouds are ceiling hung acoustical shapes, wrapped in textile, available in standard modular sizes or custom fabricated to meet the design goals of any visual motif or acoustical performance specification.

WhisperPods are individual shapes grouped together to form a WhisperCloud. Custom textile imaging using WhisperArt can be created as shown on the ceiling above.

WhisperCloud Standard Shapes Nominal 4' x 4'

WhisperPod Standard Shapes Nominal 4' x 4'

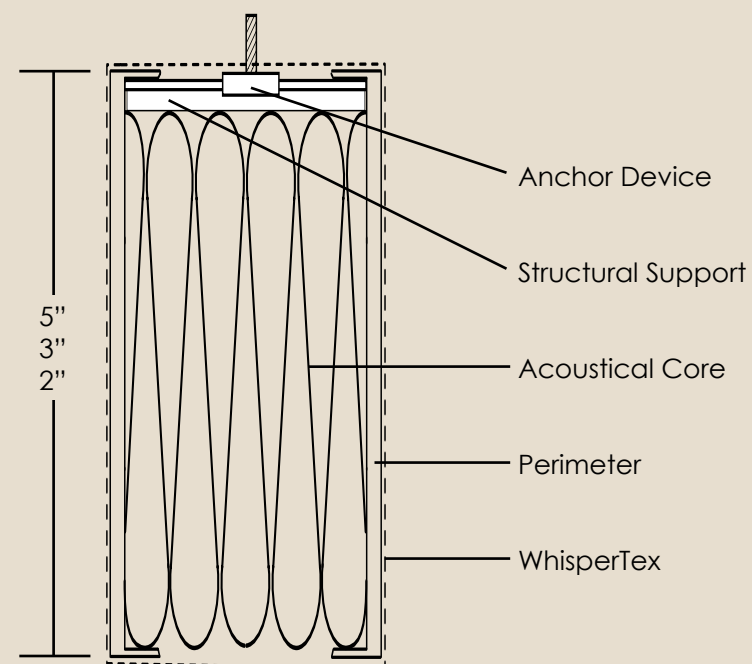

Group Your Clouds

Unique designs can be developed by combining WhisperRack with standard shapes and pods. WhisperRack is a hanging system designed to group shapes into different configurations. It allows for accurate spacing, minimum labor, easy installation and reduced costs.

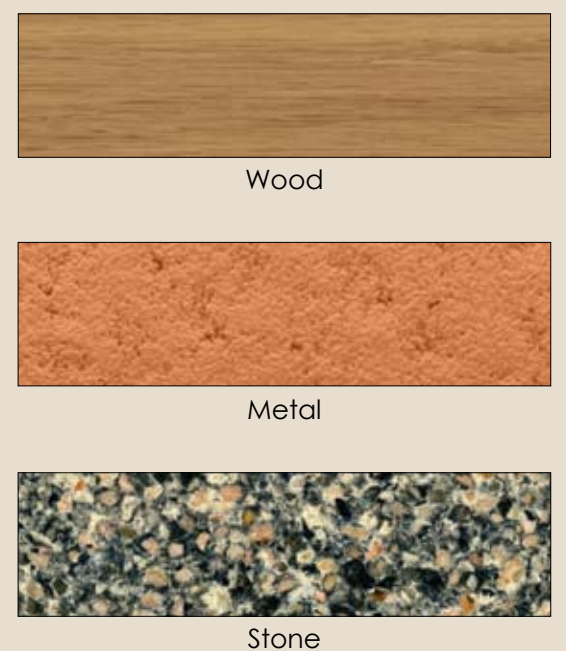

Cloud Sizes & Perimeter Finishes

WhisperCloud Perimeters come standard in black finish or in WhisperTex textile. WhisperPerimeters are also available in custom wood, stone or metal finishes. The standard WhisperCloud perimeter widths are System 2000 2", System 3000 3" and System 5000 5". These standard widths allow for a wide range of custom acoustical cores.

Typical System Components

Finishes

MegaClouds

WhisperMegaClouds can be factory manufactured and site assembled. This process is used because of size. MegaClouds can be as large as 12' x 16' and sometimes larger. MegaClouds of this size can be monolithically covered with WhisperTex wide span textiles. MegaClouds can be manufactured with penetrations for lighting and fire requirements. Call 1-800-527-7817.

Your Design - Custom Shapes

WhisperClouds can be fabricated within a wide range of parameters. We welcome the opportunity to meet any challenge. Our website has numerous design templates. You may send your CAD files using the templates to our design team. Please call 1-800-527-7817.

Because WhisperClouds are covered with fabric THERE ARE NO GRID LINES. They are constructed with a ridged PVC frame, do not sag or deflect and are virtually indestructible. WhisperClouds DO NOT require any special care during installation and handling as other products do. In the event of any damage or renovation the textile can be easily removed and replaced.

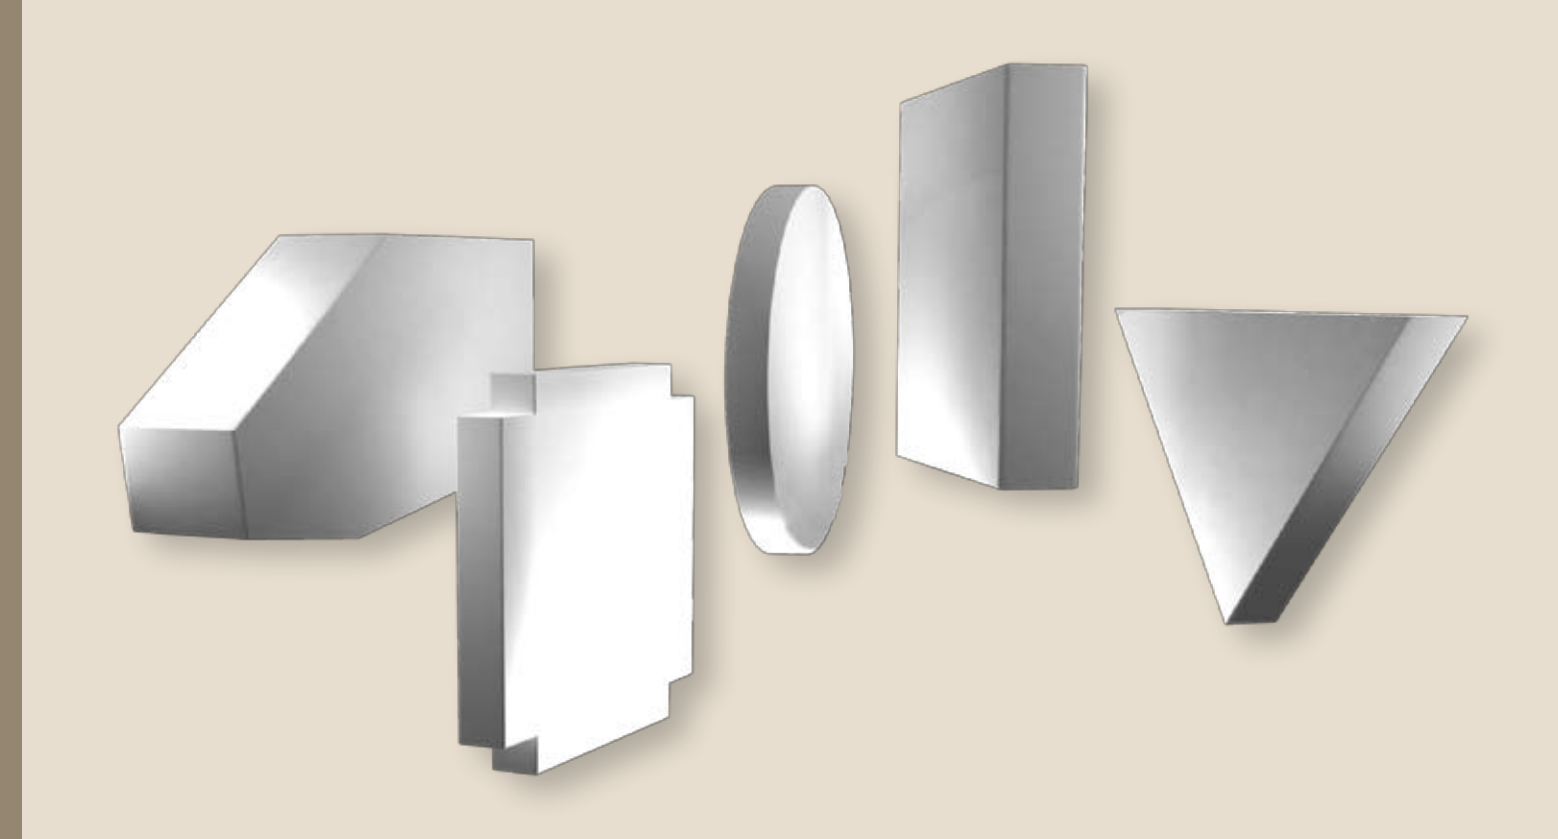

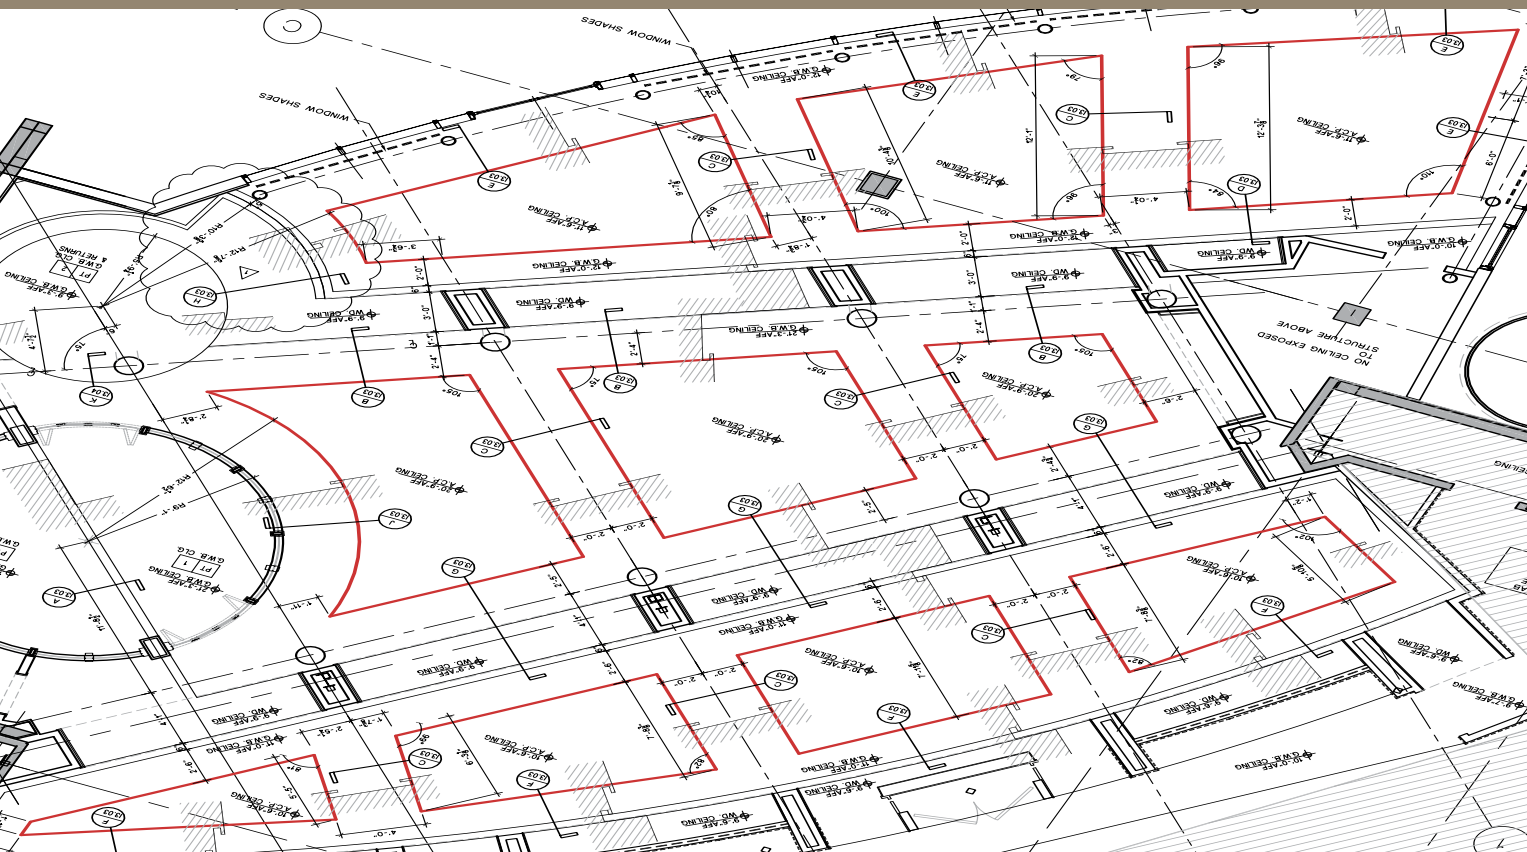

Architectural Specialty

Architectural Specialty clouds are clouds of unusual size and shape, designed to follow the form of an interior space as shown below. Most often these clouds are designed in continuous rows or columns and align with each other to form a beautiful interrelated group design.

Penetrations for can lights or pendants are easily built into these clouds reducing job costs and construction time.

Because of the custom nature of these clouds, please contact WhisperEngineering for assistance 1-800-527-7817.

WhisperBaffle

These attractive Baffle forms are constructed of a rigid plastic perimeter, absorptive or reflective acoustical cores and finished with your choice of 51 WhisperTex fabric colors or COM. WhisperBaffles are available in 23 standard shapes or custom sized to your needs.

Canopies

WhisperCanopies give the designer tools that allow them to create free form ceiling areas that provide an uplifting character to any space with striking visual impact. Graceful flowing arcs can be created with Whisper Canopies and they may be covered with any of our 51 WhisperTex colors or COM.

Standard Fabrics

WhisperTex is a specially designed acoustical transparent textile available in 51 colors. It is manufactured for Whisper Walls to meet specific tolerances for sound control and stretching.

WhisperTex Wide Span has all the properties of the standard WhisperTex, however, it is available in three meter or five meter widths. The color choices are limited to Vienna Creme, White or Black. Let our design department HELP YOU. Call 1-800-527-7817.

COM Textile is available. Contact Whisper Walls or your Whisper Walls Representative.
